STANDARDS FOR ACCREDITATION
OF NURSE ANESTHESIA PROGRAMS

Practice Doctorate

The projected date for implementation of all standards, following further revision and approval, is January 2015.

Approved by the Council on Accreditation of Nurse Anesthesia Educational Programs
May 29, 2013

Draft 2

Yellow highlighting indicates Standards/Glossary definitions already approved by the COA – no longer up for debate.
Preamble  Introduction

The Council on Accreditation of Nurse Anesthesia Educational Programs (Council) accredits nurse anesthesia programs within the United States and Puerto Rico that award post-master's certificates, master's, or doctoral degrees, including programs offering distance education. Students accepted into accredited entry-level programs on January 1, 2022, must graduate with doctoral degrees. The Council also offers accreditation for post-graduate fellowships.

The accreditation standards for entry-level nurse anesthesia programs at the offering practice doctorate degrees and post-graduate fellowships level are written with input from a wide community of interest consisting of many individuals and groups that are affected by them, including certified registered nurse anesthetist (CRNA) practitioners and educators; nurse anesthesia students; administrators and faculty of colleges and universities; hospital administrators; state boards of nursing; the staff of the U.S. Department of Education (USDE); the Council for Higher Education Accreditation (CHEA) and other nationally recognized accreditation agencies; members of the National Board of Certification and Recertification for Nurse Anesthetists; and the Board of Directors of the American Association of Nurse Anesthetists (AANA). Special recognition is given to members attending of the Assembly of School Faculty meeting of Nurse Anesthesia and to those on the AANA Education Committee for their continuing efforts to promote, support, and encourage the Council's objectives of quality assessment and enhancement in nurse anesthesia education through the accreditation process.

Practice Doctorate Programs

The standards are designed to prepare graduates with competencies for entry into anesthesia practice. Entry into practice is defined as:

*Entry into practice competencies for the nurse anesthesia professional prepared at the practice doctoral level are those required at the time of graduation to provide safe, competent, and ethical anesthesia and anesthesia-related care to patients for diagnostic, therapeutic, and surgical procedures.*

*Entry into practice competencies should be viewed as the structure upon which nurse anesthetists continue to acquire knowledge, skills, and abilities along the practice continuum that starts at graduation (proficient), and continues throughout their entire professional careers (expert).*
Post-Graduate Fellowships

A Post-Graduate Fellowship is a program, accredited by the COA that contains advanced education and training in a focused area of specialty practice or concentration. The Post-Graduate Fellowship is applicable to Certified Registered Nurse Anesthetists (CRNAs) and may be applicable to other advanced practice registered nurses (APRN). Although each Post-Graduate Fellowship may be unique, the Standards are intended to promote quality and consistency for accreditation purposes. These standards apply to Post-Graduate Fellowships conducted face-to-face and/or via distance education.

Future Revisions

Suggestions for future revisions should be forwarded to:

Council on Accreditation of Nurse Anesthesia Educational Programs

222 South Prospect Avenue

Park Ridge, Illinois 60068-4037
Mission, Purposes, and Objectives of the Council on Accreditation of Nurse Anesthesia Educational Programs

Mission Statement

The Council’s mission, through its accreditation activities, is to (1) grant public recognition to nurse anesthesia programs and institutions that award graduate degrees for entry into nurse anesthesia practice, award graduate degrees for CRNAs, award post-graduate certificates, and/or offer post-graduate fellowships that meet nationally established standards of academic quality and (2) assist programs and institutions in improving educational quality.

The goals of the Council are to:

1. Pursue its mission, goals and objectives and conduct its operations with integrity.

2. Formulate and/or adopt standards, criteria, policies and procedures for the accreditation of nurse anesthesia educational programs, subject to review and comment by all constituencies that are significantly affected by them.

3. Foster academic quality in educational programs.

4. Utilize evaluation to measure a program’s degree of success in meeting programmatic objectives and accreditation requirements within the context of its institutional mission and resources.

5. Encourage innovations in program design and/or experimental programs that are based on sound educational principles.

6. Ensure responsiveness to its communities of interest including, but not limited to, students, programs, and the public.

7. Foster student achievement and continuous program improvement as a basis of promoting quality nurse anesthesia services to the public.

8. Incorporate public involvement in its decision making related to quality and accountability.
The objectives of the COA-Council are to:

1. Publish standards of accreditation and policies and procedures defining the accreditation process for nurse anesthesia graduate programs with input from the communities of interest.
2. Periodically assess programs for compliance with accreditation standards through annual reports, self-studies, site visits, and progress reports.
3. Confer and publish accreditation decisions and the reasons for the decisions.
4. Require programs to routinely provide reliable performance and information data to the public.
5. Offer consultation concerning nurse anesthesia education to enhance academic quality.
6. Conduct collaborative reviews with other accrediting agencies, as appropriate.
7. Maintain external recognition by recognized authorities.
8. Participate in a systematic self-assessment of the standards, policies, and procedures of accreditation to ensure accuracy and reliability.
9. Provide accurate information concerning accredited programs.
10. Consider legitimate allegations from complainants concerning the accreditation process.
11. Employ appropriate and fair procedures in decision-making.
12. Ensure the academic quality of distance and traditional educational offerings.

Approved: January 2013 Council Meeting

The Value of Accreditation

Accreditation is a voluntary activity that has been accepted for more than 100 years in the U.S. in contrast to other countries where governments supervise and control educational institutions. The goals of privately operated U.S. accrediting agencies are to assure and improve the quality of education offered by the institutions and programs they accredit. In this system, accreditation by an accrediting agency that is recognized by the U.S. Secretary of Education is necessary for institutions and programs to receive federal funds and for students to receive federal aid. Accrediting agencies recognized by federal and state governments are deemed reliable authorities of academic quality.

The large percentage of Americans who benefit from higher education, the reputation of U.S. universities for both fundamental and applied research, and the widespread availability of
professional services in the United States all attest to the high quality of postsecondary education and the success of the accreditation system that U.S. institutions and professions have devised to promote quality.

Accreditation is a peer process whereby a private, nongovernmental agency grants public recognition to an institution or specialized program that meets or exceeds nationally established standards of acceptable educational quality. A guiding principle of accreditation is the recognition that institutions or specialized programs have a right to expect that they will be evaluated in the light of their own stated purposes, as long as those purposes are educationally appropriate, meet accreditation standards, and fall within the recognized scope of the accrediting body.

There are two fundamental reasons for accreditation: (1) to ensure quality assessment and (2) to assist in quality improvement. Accreditation, which applies to institutions or programs, must be distinguished from certification and licensure, which apply to individuals. Accreditation cannot guarantee the quality of individual graduates, but it can provide reasonable assurance of the context and quality of the education that is offered.

Accreditation provides services that are of value to several constituencies:

The public receives:

1. reasonable assurance of the external evaluation of a program and its conformity with general expectations in the professional field;
2. identification of programs that have voluntarily undertaken explicit activities directed at improving their quality and their successful execution;
3. improvement in the professional services available to the public, resulting from the modification of program requirements to reflect changes in knowledge and practice that are generally accepted in the field;
4. less need for intervention by public agencies in the operations of educational programs, because of the availability of private accreditation for the maintenance and enhancement of educational quality.

Students benefit from:

1. reasonable assurance that the educational activities of an accredited program have been found to be satisfactory and meet the needs of students;
2. assistance in transferring credits among programs and institutions;
3. a uniform prerequisite for entering the profession.

Programs receive:

1. the stimulus needed for self-directed improvement;

2. peer review and counsel provided by the accrediting agency;

3. enhancement of their reputation, because of the public’s regard for accreditation;

4. eligibility for selected governmental funding programs and private foundation grants.

The profession realizes:

1. a means for participation of practitioners in establishing the requirements for preparation to enter the profession;

2. a contribution to the unity of the profession by bringing together practitioners, educators, students, and the communities of interest in an activity directed toward improving professional preparation and practice.

References:

The Accreditation Process

The Council on Accreditation is responsible for establishing the standards for accreditation of nurse anesthesia educational programs, subject to consideration of the revisions by the communities of interest. The practice doctorate standards address: (A) conducting institutions, (B) faculty, (C) students, (D) graduates, (E) curriculum, (F) clinical sites, (G) policies, and (H) evaluation. In an effort of ongoing improvement, the standards will undergo continual review and be subject to periodic major and minor revisions as indicated. Compliance with the standards forms the basis for the Council’s accreditation decisions.

Certain criteria have been ascertained to have major significance regarding educational quality. Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation and is marked with an asterisk (*). The Council reserves the right to identify other areas or criteria. The accreditation process for established programs is based on the self-evaluation study document prepared by the program and on an onsite review by a team of two or three reviewers. The process is repeated at intervals of up to 10 years. A summary report of the review is presented to the Council for an
accreditation decision. New programs that seek accreditation status must successfully complete an initial accreditation review, admit students and undergo a subsequent review after the first students graduate when it is possible to evaluate educational outcomes following the first graduation.

Ongoing oversight by the Council is provided between formal programmatic reviews. Programs are required to advise the Council and get approval for major changes. The Council also investigates situations brought to its attention that may affect a program's accreditation status. Each program is required to complete and submit an annual report.

In a broad sense, accreditation of nurse anesthesia educational programs provides quality assurance concerning educational preparation through continuous self study and review. The ultimate goals of the accreditation program are to improve the quality of nurse anesthesia education and provide competent nurse anesthetists for healthcare consumers and employers. Graduation from an accredited program is a prerequisite for eligibility for national certification, and it is also used as a criterion by licensing agencies, employers, and potential students in the decisions they make and in determining eligibility for government funding.

NOTE: The process for accreditation of Post-Graduate Fellowships will be determined by the Council.
A. CONDUCTING INSTITUTION STANDARDS

1. The mission and/or philosophy of the conducting institution's governing body promotes educational excellence and supports the nurse anesthesia program within a doctoral framework.

2. The degree granting institution is accredited by a regional accrediting agency. The accrediting agency must be officially recognized by the U.S. Secretary of Education to accredit institutions (see Glossary “Institutional Accrreditor”). Note: Requirement adopted and moved to the Accreditation Policies and Procedures manual.

3. The organizational relationships of the institution, academic unit, and program are clearly delineated.

4. The conducting organization completes a legally binding written agreement that outlines the expectations and responsibilities of all parties when an academic affiliation is established or two or more entities with unshared governance enter into a joint arrangement to conduct a program (see Glossary “Unshared Governance”).

5. The amount of advanced standing or transfer credit awarded by the degree granting institution is clearly stated and publicized.

6. The governance structure(s) facilitates effective communication.

7. The CRNA program administrator, or an individual designated by the CRNA program administrator, participates in institutional planning, curriculum design and review, and other appropriate governance roles.

8. The institution’s and/or program’s committee structure is appropriate to meet program objectives, and includes public, student and faculty participation (see Glossary “Public Member”).

9. The conducting institution provides sufficient time to permit faculty to fulfill their obligations to students including clinical and classroom teaching, counseling and evaluation, and advising on doctoral level scholarly activities.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
910. The conducting institution provides sufficient protected time to permit faculty to fulfill their own scholarly activities, service, administrative, and clinical responsibilities (see Glossary "Protected Time").

* 1011. The program’s resources must be adequate to support the scale size and scope of the operation program, and the total number of students to appropriately prepare students for practice and to promote the quality of graduates including:

10. 1. financial resources that are budgeted and used to meet accreditation standards.

10. 2. physical resources including facilities, equipment, and supplies.

10. 3. learning resources including clinical sites, library, and technological access and support.

10. 4. faculty.

10. 5. support personnel.

10. 6. student services (see Glossary "Student Services").

* 1112. The program seeks Council approval prior to increasing class size and demonstrates reasonable assurance there are adequate resources as delineated in Standard A.10.

* 1213. The program is required to act in accordance with the Council's Accreditation Policies and Procedures.

1314. There is evidence that eligibility and certification requirements are maintained by institutions or programs relying on Council’s accreditation to participate in Higher Education Opportunity Act, Title IV programs (see Glossary "Title IV Eligibility").

---

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
B. FACULTY STANDARDS

CRNA Program Administrator:

* 1. The program is administered by a doctorally prepared CRNA who has the leadership authority and accountability for program administration.¹

2. The CRNA program administrator’s doctoral degree must be from an institution of higher education that was accredited by an agency officially recognized by the U.S. Secretary of Education to accredit institutions at the time the degree was conferred (see Glossary “Institutional Accréditator”).

3. The CRNA program administrator must be experientially qualified to provide leadership to the program (see Glossary “Experientially Qualified”).

4. The CRNA program administrator is full time (see Glossary "Full Time Program Administrator").

* 5. The CRNA program administrator has a current license or privilege to practice as a registered professional nurse and/or APRN in the state or territory of jurisdiction of the program (see Glossary “Advanced Practice Registered Nurse” and "Privilege to Practice").²

* 6. The CRNA program administrator has current certification or current recertification by the National Board of Certification and Recertification for Nurse Anesthetists (NBCRNa).

7. The CRNA program administrator has the authority to prepare and administer the program budget.

8. The CRNA program administrator demonstrates knowledge of environmental issues that may influence the program and nurse anesthesia practice by engaging in professional development.

¹ Doctoral degrees are required for the CRNA program administrators (program administrator and assistant program administrator) in all doctoral programs by 2018.

² A federal government/military nurse practicing exclusively in federal or military systems only needs one license from any state or territory per U.S. federal government/military policy.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
**Assistant CRNA Program Administrator:**

* 9. The assistant CRNA program administrator is a doctorally prepared CRNA who is experientially qualified to assist the CRNA program administrator and, if required, assume leadership responsibilities for the program *(see Glossary “Experientially Qualified”)*.  

10. The assistant CRNA program administrator’s doctoral degree must be from an institution of higher education that was accredited by an agency officially recognized by the U.S. Secretary of Education to accredit institutions at the time the degree was conferred *(see Glossary “Institutional Accrrediton”)*.

* 11. The assistant CRNA program administrator has a current license or privilege to practice as a registered professional nurse and/or APRN in the state or territory of jurisdiction of the program *(see Glossary “Advanced Practice Registered Nurse” and “Privilege to Practice”)*.

* 12. The assistant CRNA program administrator has current certification or current recertification by the NBCRNA.

13. The assistant CRNA program administrator demonstrates knowledge of environmental issues that may influence the program and nurse anesthesia practice by engaging in professional development.

**CRNA Faculty:**

14. Didactic faculty meet the governing body’s requirements for teaching doctoral level courses.

* 15. CRNA faculty have a current license or privilege to practice as a registered professional nurse and/or APRN in compliance with state law *(see Glossary “Advanced Practice Registered Nurse” and “Privilege to Practice”)*.

---

1 Doctoral degrees are required for the CRNA program administrators (program administrator and assistant program administrator) in all doctoral programs by 2018.

2 A federal government/military nurse practicing exclusively in federal or military systems only needs one license from any state or territory per U.S. federal government/military policy.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
16. CRNA faculty have current certification or current recertification by the NBCRNA.

17. Core CRNA program faculty, including the program administrator, assistant program administrator, and course directors, have formal instruction in curriculum, evaluation and instruction (see Glossary “Formal Instruction in Curriculum, Evaluation and Instruction”).

18. Only CRNA and anesthesiologist faculty may teach clinical anesthesia content. CRNA faculty who teach clinical anesthesia content must demonstrate clinical competency (see Glossary “Demonstration of Clinical Competency”).

19. Faculty who teach clinical anesthesia content must demonstrate clinical competency (see Glossary “Demonstration of Clinical Competency”). Only CRNA and anesthesiologist faculty may teach clinical anesthesia content.

Non-CRNA Faculty:

20. Non-CRNA faculty must be academically prepared for the areas in which they teach (see Glossary "Academic Preparation").

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
C. STUDENT STANDARDS

Selection and Admissions:

1. The program enrolls only students who by academic and experiential achievement are of the quality appropriate for the profession and who have the ability to benefit from their education. *(see Glossary “Ability to Benefit”).*

2. Admission requirements include:
   
   2.1. A baccalaureate or graduate degree in nursing or an appropriate major.

   2.2. An unencumbered license as a registered professional nurse and/or an APRN in the United States or its territories, or protectorates. *(see Glossary “Advanced Practice Registered Nurse”).*

   2.3. A minimum of one year full-time work experience, or its part-time equivalent, as a RN in a critical care setting. The applicant must have developed as an independent decision-maker capable of using and interpreting advanced monitoring techniques based on knowledge of physiological and pharmacological principles *(see Glossary "Critical Care Experience”).*

   2.4. Current certification in advanced cardiac life support (ACLS) and pediatric advanced life support (PALS).

Student Participation and Conduct:

3. Students demonstrate professionalism, including a commitment to academic and personal integrity.

4. Students keep accurate and complete clinical experience logs that are reviewed by program faculty on a regular basis *(see Glossary "Counting Clinical Experiences").*

5. Students are certified in Advanced Cardiac Life Support (ACLS) and Pediatric Advanced Life Support (PALS) before beginning clinical activities.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
D. GRADUATE STANDARDS

The graduate must demonstrate the ability to:

Patient Safety:

1. Be vigilant in the delivery of patient care.

2. Refrain from engaging in extraneous activities that abandon or minimize vigilance while providing direct patient care (e.g., texting, reading, e-mailing, etc.).

3. Conduct a comprehensive equipment check.

4. Protect patients from iatrogenic complications.

Perianesthesia:

5. Provide individualized care throughout the perianesthesia continuum.

6. Deliver culturally competent perianesthesia care (see Glossary “Culturally Competent”).

7. Provide anesthesia services to all patients across the lifespan (see Glossary "Anesthesia Services" and “Across the Lifespan”).

8. Perform a comprehensive history and a physical assessment.

9. Administer general anesthesia to patients with a variety of physical conditions.

10. Administer general anesthesia for a variety of surgical and medically related procedures.

11. Administer and manage a variety of regional anesthetics.

12. Maintain current certification in ACLS and PALS.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
**Critical Thinking:**

* 14. Provide nurse anesthesia services based on evidence based principles.

* 15. Perform a preanesthetic assessment prior to providing anesthesia services.

* 16. Assume responsibility and accountability for diagnosis.

* 17. Formulate an anesthesia plan of care prior to providing anesthesia services.

* 18. Identify and take appropriate action when confronted with anesthetic equipment-related malfunctions.

* 19. Interpret and utilize data obtained from noninvasive and invasive monitoring modalities.

* 20. Calculate, initiate, and manage fluid and blood component therapy.

* 21. Recognize, evaluate, and manage the physiological responses coincident to the provision of anesthesia services.

* 22. Recognize and appropriately manage complications that occur during the provision of anesthesia services.

* 23. Use science-based theories and concepts to analyze new practice approaches.

* 24. Pass the national certification examination (NCE) administered by NBCRNA.

**Communication:**

* 25. Utilize interpersonal and communication skills that result in the effective exchange of information and collaboration with patients and their families.

* 26. Utilize interpersonal and communication skills that result in the effective interprofessional exchange of information and collaboration with other healthcare professionals.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
27. Respect the dignity and privacy of patients while maintaining confidentiality in the delivery of interprofessional care.

28. Maintain comprehensive, timely, accurate, and legible healthcare records.

29. Transfer the responsibility for care of the patient to other qualified providers in a manner that assures continuity of care and patient safety.

30. Teach others.

Leadership:

30. Integrate critical and reflective thinking in his or her leadership approach.

31. Provide leadership that facilitates intraprofessional and interprofessional collaboration.

Professional Role:

32. Understand the personal obligation to adhere to the Code of Ethics for the Certified Registered Nurse Anesthetist.

33. Interact on a professional level with integrity.

34. Apply ethically sound decision-making processes.

35. Function within legal and regulatory requirements.

36. Accept responsibility and accountability for his or her practice.

37. Provide anesthesia services to patients in a cost-effective manner.

38. Accept responsibility and accountability to appear for duty appropriately rested and fit to provide the services required by patients.

39. Demonstrate knowledge of wellness and chemical dependency in the anesthesia profession through completion of content in wellness and chemical dependency (see Glossary "Chemical Dependency and Wellness").

---

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
* 3941. Inform the public of the role and practice of the CRNA.

* 4042. Evaluate how public policy making strategies impact the financing and delivery of healthcare.

* 4143. Advocate for health policy change to improve patient care.

* 4244. Advocate for health policy change to advance the specialty of nurse anesthesia.

* 4345. Analyze strategies to improve patient outcomes and quality of care.

* 4446. Analyze health outcomes in a variety of populations.

* 4547. Analyze health outcomes in a variety of clinical settings.

* 4648. Analyze health outcomes in a variety of systems.

* 4749. Disseminate research evidence.

* 4850. Use information systems/technology to support and improve patient care.

* 4951. Use information systems/technology to support and improve healthcare systems.

* 5052. Analyze business practices encountered in nurse anesthesia delivery settings.

---

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
E. CURRICULUM STANDARDS

1. The curriculum is designed to award a Doctor of Nursing Practice or Doctor of Nurse Anesthesia Practice to graduate students who successfully complete graduation requirements unless a waiver for this requirement has been approved by the Council.

2. The curriculum is designed to focus on the full scope of nurse anesthesia practice including:
   
   a. Course(s): Advanced Physiology/Pathophysiology, Advanced Pharmacology, Basic and Advanced Principles in Nurse Anesthesia, and Advanced Health Assessment (see Glossary “Advanced Health Assessment”).

   b. Content: Advanced Physiology/Pathophysiology (120 contact hours), advanced pharmacology (90 contact hours), basic and advanced principles in nurse anesthesia (120 contact hours), research (75 contact hours), advanced health assessment (45 contact hours), human anatomy, chemistry, biochemistry, physics, genetics, acute and chronic pain management, radiology, ultrasound, anesthesia equipment, professional role development, chemical dependency and wellness, informatics, ethical and multicultural healthcare, leadership and management, business of anesthesia/practice management, health policy, healthcare finance, integration/clinical correlation (see Glossary “Chemical Dependency and Wellness,” “Pain Management, Acute,” “Pain Management, Chronic,” "Professional Role Development," and “Radiology”).

   c. Clinical experiences (see Appendix).

3. The curriculum meets commonly accepted national standards for similar degrees (see Glossary “Commonly Accepted National Standards”).

4. The post-baccalaureate curriculum is a minimum of 3 years of full-time study or longer if there are periods of part-time study.\(^4\)

---

\(^4\) Shorter programs of study can be submitted for consideration when accompanied by supporting rationale that ensures compliance with accreditation standards.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
5. The curriculum is composed of sequential and integrated courses designed to facilitate achievement of the program’s terminal objectives.

6. All courses have clearly stated objectives/outcomes.

7. Distance education programs and courses satisfy accreditation standards and achieve the same objectives/outcomes as traditional educational offerings.

8. The curriculum requires the student to complete scholarly work that demonstrates knowledge and scholarship skills within the area of academic focus (see Glossary “Scholarly Work”).

9. The clinical curriculum provides students with experiences in the perioperative process that are unrestricted, and promote their development as competent nurse anesthetists.

10. The program provides opportunities for students to obtain clinical experiences outside the regular clinical schedule by a call experience or other mechanism (see Glossary “Call Experience”).

11. Simulated clinical experiences are incorporated in the curriculum (see Glossary “Simulated Clinical Experience”).
F. CLINICAL SITE STANDARDS

1. The program demonstrates it has sufficient clinical resources to assure graduates individually meet all accreditation requirements.

2. The program has a legally binding contract with the clinical site(s) that outlines expectations and responsibilities of both parties.

3. The program identifies a CRNA coordinator for each clinical site who possesses a master’s degree (doctoral preparation preferred) to guide student learning. An anesthesiologist may serve in this capacity.\(^5\)

4. The program demonstrates that the educational environment at all clinical sites is conducive to student learning.

5. Supervision at clinical sites is limited to CRNAs and anesthesiologists who are institutionally credentialed to practice and immediately available for consultation. Instruction by graduate registered nurse anesthetists or physician residents is never appropriate prohibited.

6. Clinical site orientations are provided that outline role expectations and responsibilities of students and identify available learning resources.

7. The clinical supervision ratio of students to instructor insures patient safety by taking into consideration: the complexity of the anesthetic and/or surgical procedure, the student’s knowledge and ability, and the co-morbidities associated with the patient. At no time does the number of students directly supervised by an individual clinical instructor exceed 2:1 (see Glossary “Clinical Supervision”).

8. The program restricts clinical supervision in nonanesthetizing areas to credentialed experts who are authorized to assume responsibility for the student (see Glossary “Credentialed Expert”).

9. Student time commitment consists of a reasonable number of hours that does not exceed 64 hours per week (see Glossary “Reasonable Time Commitment”).

\(^5\)An exception for the master’s degree requirement must receive Council approval.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
G. POLICY STANDARDS

1. Accurate cumulative records of educational activities are maintained.

* 2. Truth and accuracy are evidenced in recruiting and admissions practices, academic calendars, catalogs, publications, grading, and advertising.

* 3. The following are published annually:

   3.1. accurate information about the nurse anesthesia program’s programmatic accreditation status.

   3.2. the specific academic program covered by the accreditation status.

   3.3. the name, address, telephone number and URL (http://home.coa.us.com) of the Council on Accreditation of Nurse Anesthesia Educational Programs.

   3.4. for the most recent graduating class, the:

      3.4.1. attrition.

      3.4.2. employment of graduates within six months of graduation.

      3.4.3. NBCRNA NCE pass rate for first time takers (see Glossary "Published Outcomes").

4. Policies and procedures that are fair, equitable, and do not discriminate are defined (see Glossary "Nondiscriminatory Practice").

5. Policies and procedures regarding academic integrity are defined and used in all educational activities.

6. Policies outline the procedures for student discipline and dismissal.

7. The program demonstrates that it processes complaints, grievances, and appeals in a timely and equitable manner affording adequate due process.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
8. The program forbids the employment of nurse anesthesia students as nurse anesthetists by title or function.

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
H. EVALUATION STANDARDS

1. The program has a written systematic plan for continuous self-assessment that incorporates the following:

* 1.1. Formative and summative evaluations of each student that are conducted for the purpose of counseling students and documenting student achievement.

   1.1.1. Terminal evaluation is completed to demonstrate student achievement of Graduate Standards D1-D50.

   1.1.2. There is an established assessment procedure to verify competence in pertinent scholarship skills relevant to the area of academic focus.

   1.1.2.1. Faculty advising provides students with ongoing feedback, both formal and informal.

* 1.2. Students evaluate the quality of:

  1.2.1. courses

  1.2.2. didactic instruction

  1.2.3. clinical sites

  1.2.4. clinical instruction

  1.2.5. teaching and learning environment

  1.2.6. advising/mentorship their own achievement (self-evaluation)

  1.2.6.1.2.7. their own achievement (self-evaluation)

  1.2.7. program

  1.2.8. institutional/program resources

  1.2.8.2. student services (see Glossary “Student Services”)

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
1.2.87.3. curriculum

1.3. Faculty evaluate the quality of:

1.3.1. faculty services

1.3.2. the program

1.3.3. their own contributions to teaching, practice, service, and scholarly activities (self-evaluation)

1.4. Alumni evaluate:

1.4.1. the quality of the program

1.4.2. their preparation to enter anesthesia practice (self-evaluation)

1.4.3. their involvement in professional activities (self-evaluation)

1.5. Employers evaluate the performance of recent graduates:

1.5.1. competence of graduates entering anesthesia practice

1.5.2. performance of recent graduates

1.6. Outcome measures of academic quality including:

1.6.1. student attrition

1.6.2. NBCRNA NCE pass rates and mean scores

1.6.3. employment rates

1.6.4. any other outcome methods of student achievement identified by the program and/or institution (see Glossary “Academic Quality”).

* 2. The program utilizes evaluation data (including that from the systematic plan for continuous self-assessment) to:

2.1. monitor and improve program quality and effectiveness

* Failure to fully comply with one or more of these criteria is considered to be of critical concern in decisions regarding nurse anesthesia program accreditation.
2.2. monitor and improve student achievement

2.3. monitor and improve advising/mentorship

2.3, 2.4. monitor compliance with accreditation requirements and initiate corrective action should areas of noncompliance occur.
The minimum number of clinical hours is **2000 (1200 preferred)**.

Glossary

**Ability to Benefit** – The ability to benefit refers to the integrity of a college/university or education program to enroll only those individuals with the capacity to succeed and gain value from the education.

**Academic Preparation** - Academic preparation includes degree specialization, specialty course work, and other preparation to address the major concepts included in the courses taught.

**Academic Quality** - Academic quality refers to results associated with teaching, learning, research, and service within the framework of the institutional mission. Academic quality requires an effective learning environment and sufficient resources for faculty and students to obtain the objectives of the program and meet accreditation standards.

**Across the Lifespan** - Across the lifespan refers to a patient population focus of families and individuals. The continuum of care ranges from the prenatal period to end of life with health statuses ranging from healthy through all levels of acuity, including immediate, severe, or life-threatening illnesses or injury.

**Advanced Health Assessment** - A course in advanced health assessment includes assessment of all human systems, advanced assessment techniques, diagnosis, concepts, and approaches.

**Advanced Practice Registered Nurse (APRN)** - APRN refers to advanced practice nurses in the roles of certified registered nurse anesthetists, certified nurse-midwives, clinical nurse specialists, and certified nurse practitioners. It is recognized that states vary in the titles they use for the different advanced practice nursing roles. Programs may enroll advanced practice nurses regardless of title authorized by state.

**Alternative Airway Management Techniques** - Alternative airway management techniques include but are not limited to fiberoptic intubation, light wand, Glidescope, retrograde tracheal intubation, combitube, transtracheal jet ventilation, gum elastic bougie/tracheal tube changer, LMA guided intubation, cricothyroidotomy, video assisted laryngoscopy, and blind nasal intubation.

**Anesthesia Services** - Anesthesia and anesthesia-related care represent those services which anesthesia professionals provide upon request, assignment and referral by the patient’s healthcare provider authorized by law, most often to facilitate diagnostic, therapeutic and surgical procedures. In other instances, the referral or request for consultation or assistance may be for management of pain associated with obstetrical labor and delivery, management of acute and chronic mechanical ventilation, or management of acute and chronic pain through the performance of selected diagnostic and therapeutic blocks or other forms of pain management.
**Call Experience** - Call is a planned clinical experience outside the normal operating hours of the clinical facility, for example, after 5 p.m. and before 7 a.m., Monday through Friday, and on weekends. Assigned duty on shifts falling within these hours is considered the equivalent of an anesthesia call, during which a student is afforded the opportunity to gain experience with emergency cases. Although a student may be assigned to a 24 hour call experience, at no time may a student provide direct patient care for a period longer than 16 continuous hours.

**Chemical Dependency and Wellness** - Chemical dependency includes substance related disorders characterized by chronicity and progression that threaten wellness. Wellness is defined as a positive state of the mind, body, and spirit reflecting a balance of effective adaptation, resilience, and coping mechanisms in personal and professional environments that enhance quality of life. The wellness/chemical dependency curriculum must be an evidence-based program of study which could include but is not limited to the following five key conceptual components:

1. Importance of Wellness to Health Care Professionals: Describe the integration of healthy lifestyles, adaptive coping mechanisms for career stressors, and an awareness of chemical dependency risk factors and pathophysiology.
2. Healthy Lifestyles: Describe attitudes, behaviors, and strategies (i.e., healthy nutrition, exercise, sleep patterns, and critical incidents' stress management) that create a positive balance between one’s personal and professional life for personal wellness.
3. Coping Mechanisms: Describe adaptive or maladaptive strategies and/or behaviors employed by individuals to reduce the intensity of experienced stress.
4. Identification and Intervention: Describe needed awareness of the symptoms of chemical dependency, appropriate strategies for successful intervention, treatment, and aftercare.
5. Re-Entry into the Workplace: Broadly describes components of successfully returning to anesthesia practice. These components include frameworks for returning to administrative, academic or clinical anesthesia practice, strategies to reduce the likelihood of relapse, and elements of lifestyle adaptation that lead to a healthy balance of professional work and physical, emotional, and spiritual health.

**Clinical Hours** - Clinical hours include time spent in the actual administration of anesthesia (i.e., anesthesia time) and other time spent in the clinical area. Examples of other clinical time would include in-house call, preanesthesia assessment, postanesthetic assessment, patient preparation, OR preparation, and time spent participating in clinical rounds. Total clinical hours are inclusive of total hours of anesthesia time; therefore, this number must be equal to or greater than the total number of hours of anesthesia time.

**Clinical Supervision** - Clinical oversight of graduate students in the clinical area must not exceed 1) two graduate students to one CRNA, or 2) two graduate students to one anesthesiologist, if no CRNA is involved. There may be extenuating circumstances where supervision ratios may be exceeded for brief periods of time (e.g., life threatening situations); however, the program must demonstrate that this is a rare situation for which contingency plans are in place (e.g.,
additional CRNA or anesthesiologist called in, hospital diverts emergency cases to maximize patient safety).

**Commonly Accepted National Standards** - Commonly accepted national standards are standards that are generally recognized as determining the quality of similar degrees by the larger community of higher education in the United States.

**Counting Clinical Experiences** - Students can only take credit for a case where they personally provide anesthesia for critical portions of the case. A student may only count a procedure (e.g., CVC placement, regional block, etc.) that he or she actually performs. Students cannot take credit for an anesthetic case if they are not personally involved with the management of the anesthetic, or only observe another anesthesia provider manage a patient’s anesthetic care. Two learners should not be assigned to the same case, except when the case provides learning opportunities for two students and two anesthesia providers are necessary due to the acuity of the case. The program will need to justify any deviation from this requirement.

**Credentialed Expert** - An individual awarded a certificate, letter or other testimonial to practice a skill in an institution is a credentialed expert. The credential must attest to the bearer’s right and authority to provide services in the area of specialization for which she or he has been trained. Examples are: a pulmonologist who is an expert in airway management; an emergency room physician authorized by an anesthesia department to assume responsibility for airway management; or a neonatologist who is an expert in airway management.

**Critical Care Experience** - Critical care experience must be obtained in a critical care area within the United States, its territories or a U.S. military hospital outside of the United States. During this experience, the registered professional nurse has developed critical decision making and psychomotor skills, competency in patient assessment, and the ability to use and interpret advanced monitoring techniques. A critical care area is defined as one where, on a daily routine basis, the registered professional nurse manages one or more of the following: invasive hemodynamic monitors (such as pulmonary artery catheter, CVP, arterial), cardiac assist devices, mechanical ventilation, and vasoactive drips (such as norepinephrine, epinephrine, dobutamine, nicardipine, nitroglycerine). The critical care areas include the following: Surgical Intensive Care, Cardiaceriac Intensive Care, Coronary Intensive Care, Medical Intensive Care, and Pediatric or Neonatal Intensive Care units. Those who have experiences in other areas may be considered provided they can demonstrate competence with invasive monitoring, ventilators, and critical care pharmacology.

**Culturally Competent** - Cultural competency is demonstrated by effectively utilizing various approaches in assessing, planning, implementing, and administering anesthesia care for patients based on culturally relevant information.
**Demonstration of Clinical Competency** - The academic environment must provide substantial access to practice experts in order for students to learn. As the competencies needed to practice are rapidly changing, students must have access to instructors who possess clinical content knowledge and create a learning environment that is characterized by a culture of inquiry and practice scholarship that exemplifies rapid translation of new knowledge into practice, and utilizes evaluation of practice-based models of care.

Clinical competence may be demonstrated by an instructor's involvement in one or more of the following:

- Current clinical practice
- Research in clinical area
- Education in the clinical area
- Utilization of evidence based practice in instruction, in consultation with clinical experts as appropriate
- Participation in continuous professional development program
- Consultation with clinical experts

**Experientially Qualified** - Program Administrators must possess: a) a minimum of four years clinical experience as a CRNA; b) graduate preparation in the basic and clinical sciences relevant to nurse anesthesia practice, teaching and learning, and curriculum development and implementation; c) current knowledge of CRNA practice and related professional issues; and d) current knowledge of institutional and programmatic accreditation requirements for nurse anesthesia educational programs. **Administrative experience is preferred.**

Assistant Program Administrators must possess: a) a minimum of two years clinical experience as a CRNA; b) graduate preparation in the basic and clinical sciences relevant to nurse anesthesia practice, teaching and learning, and curriculum development and implementation; c) current knowledge of CRNA practice and related professional issues; and d) current knowledge of institutional and programmatic accreditation requirements for nurse anesthesia educational programs.

**Formal instruction in curriculum, evaluation and instruction** - Formal instruction in curriculum, evaluation and instruction includes completed educational content evidenced on a transcript from an accredited institution of higher education, an AANA approved continuing education (CE) program, or a CE program approved by another nationally recognized professional approval organization.

**Full Time Program Administrator** - A full time program administrator is a CRNA who by title and function maintains no less than a 0.8 FTE position directing the organizational administration of a nurse anesthesia program; providing leadership and oversight of all aspects of the educational program including, but not limited to, governance, didactic and clinical curriculum, recruitment, and evaluation. The workload may include a reasonable teaching commitment. Engagement in direct patient care activities, including supervising nurse anesthesia student clinical performance, does not qualify as meeting organizational administrative duties.
**Institutional Accradiator** - The institution where a degree is earned must be accredited by an agency that is recognized by the U.S. Secretary of Education as a reliable authority for the quality of training offered.

**Nondiscriminatory Practice** - Nondiscriminatory practice is the practice of treating all individuals, including applicants, without regard to race, color, national origin, gender, marital status, sexual orientation, religion, age or disability, consistent with law. Although an applicant should not be required to provide information regarding any protected characteristics, he or she can provide such information on a voluntary basis. An applicant may be asked if he or she can perform the essential tasks or functions of a nurse anesthetist.

**Pain Management, Acute** - Acute pain management involves the treatment of pain of recent onset arising from a discrete cause, e.g., post operative pain. Acute pain may result from both surgical and nonsurgical origins. The experience of acute pain can initiate a cascade of emotional, physical, and/or social reactions.

**Pain Management, Chronic** - Chronic pain management involves the treatment of persistent pain or discomfort that continues for an extended period of time [usually involving durations greater than 3 to 6 months]. Chronic pain may result from both surgical and nonsurgical origins. Some chronic conditions cause pain that may come and go for months or years or that may cause acute increases in the pain level. Persistent pain in certain circumstances becomes a disease with complex causal interactions of biological and psychological factors and not just a symptom.

**Pain Management Encounters** - Pain management encounters are individual one-on-one patient interactions for the express purpose of intervening in an acute pain episode or a chronic pain condition. Pain management encounters must include a patient assessment prior to initiating a therapeutic action. Pain management encounters include, but are not limited to, the following:

1. Initiation of epidural or intrathecal analgesia.
2. Facilitation or initiation of patient controlled analgesia.
3. Initiation of regional analgesia techniques for post operative pain or other non-surgical pain conditions, including but not limited to, plexus blocks, local anesthetic infiltration of incisions, intercostal blocks, etc.
4. Adjustment of drugs delivered, rates of infusion, concentration or dose parameters for an existing patient controlled analgesia or patient controlled epidural analgesia.
5. Pharmacologic management of an acute pain condition in PACU.
6. Trigger point injections.
7. Electrical nerve stimulation.

The administration of intravenous analgesics as an adjunct to a general or regional anesthesia technique does not constitute a pain management encounter for purposes of meeting minimal
Standards for Accreditation of Nurse Anesthesia Programs (Practice Doctorate) Draft 2

COA required clinical experiences. The administration of regional anesthesia as the primary anesthetic technique for a surgical procedure does not constitute an acute pain management encounter.

**Privilege to Practice** - Privilege to practice is the authority to practice nursing in any compact state that is not the state of residency. Additional license is not granted for this authority.

**Professional Role Development** - Curricular content geared toward development as a professional nurse anesthetist includes, but is not limited to, the history of nurse anesthesia, standards of practice, professional ethics, regulation of practice (governmental and non-governmental), legal aspects of practice, the business of anesthesia and practice management, anesthesia reimbursement methodologies and payment policies, chemical dependency and wellness, as well as the structure and function of the state, national, and international nurse anesthesia organizations.

**Protected Time** - While the definition of protected time may vary somewhat, the intent is to allow for reasonable balance between personal wellness and professional responsibilities. The institution shall summarize expected faculty efforts for all activities including administration, teaching, research, clinical, and other activities. Other activities include, but are not limited to, those related to maintaining professional competence, scholarly pursuits, and professional advancement. The total hours of faculty commitment must provide ample time for the faculty member to maintain healthy work-life balance.

**Public Member** - A public member is someone who ensures that consumer concerns, public and private, are formally represented and who curbs any tendency to put program priorities before public interest. Such members should be selected at large, and they cannot be current or former members of the healthcare profession or current or former employees of the institution that is conducting the program. This also excludes anyone who might be perceived to have divided loyalties or potential conflicts of interest, such as a relative of an employee or former employee.

**Published Outcomes** - A program must publish accurate data and information to the public on its performance. The data must demonstrate the degree to which it has achieved its purpose and objectives. Publications can be in various formats but must include posting the information on a website that is linked to the Council’s List of Recognized Programs.

**Radiology** - Didactic curricular content includes the fundamentals of radiologic principles and various techniques; topographic anatomy; contrast agents; radiation safety; basic evaluation of normal and abnormal radiographs of the chest, abdomen, and spine; evaluation of proper positioning of various tubes (e.g., endotracheal tubes, chest tubes) and lines (e.g., central venous catheters); and proper techniques of safe fluoroscopic equipment use.

**Reasonable Time Commitment** - A reasonable number of hours to ensure patient safety and promote effective student learning should not exceed 64 hours per week. This time
commitment includes the sum of the hours spent in class and all clinical hours (see Glossary, “Clinical Hours”) averaged over four weeks. Students must have a 10 hour rest period between scheduled clinical duty periods (i.e. assigned continuous clinical hours). Students who choose to work as a registered nurse in addition to their responsibilities in the nurse anesthesia program must ensure that their work as an RN, when combined with nurse anesthesia student time commitment, does not exceed the 64 hour time commitment. At no time may a student provide direct patient care for a period longer than 16 continuous hours.

**Scholarly Work** - The doctoral program culminates with the completion of a scholarly work that demonstrates the ability to translate research findings into practice. This is an opportunity for the student to prepare a substantial final written work product, applicable to nurse anesthesia practice, that reflects the breadth of skills and knowledge the student has gained throughout the program of study. The final written work product may be in the form of a manuscript submitted for publication, a poster presented at a national meeting, design of innovative clinical practice model, or other effective means of dissemination. The structure and process of the scholarly work will vary according to the requirements of the governing institution, and conform to accepted educational standards at the practice doctoral level.

**Simulated Clinical Experiences** - Simulated clinical experiences are learning experiences involving the imitation or representation of clinical activities that are designed for competency attainment, competency assessment, or competency maintenance. Simulation involves a wide range of options including, but not limited to, standardized patients, web-based simulation, computer-based simulation, manikin-based technologies ranging from low- to high-fidelity, task trainers, and holodecks. These clinical learning experiences are intended to help bridge didactic learning with safe and effective patient care delivery.

**Student Services** - Student services consist of assistance offered to students such as financial aid, health services, insurance, placement services, and counseling.

**Title IV Eligibility** - Title IV Higher Education Opportunity Act (HEOA) federal programs administered by the U.S. Department of Education have a requirement for institutions or programs participating in federally funded programs to be accredited by an institutional accreditor recognized by the U.S. Secretary of Education. Examples of federal programs where accreditation provides a federal link to funding are Direct Loans, Student Aid Programs (Stafford, PLUS and consolidation loans) and Federal Perkins Loans.

**Unshared governance** - An unshared governance is a formal arrangement in which two or more organizations or institutions are controlled by separate administrative authorities. Written affiliation agreements are necessary between entities that participate in an unshared governance arrangement.
Appendix

History of Nurse Anesthesia Accreditation

On June 11, 1930, Agatha Hodgins, a nurse anesthetist, set forth her ideas regarding the essentials of a national organization for nurse anesthetists. They included (1) organization of a special group; (2) establishment of educational standards; (3) development of a state registration mechanism; (4) lobbying to practice without unwarranted criticism; and (5) improving the quality of work through study and research. She became the force behind establishing an organization dedicated to meeting the needs of the first nursing specialists. One of the initial objectives of the National Association of Nurse Anesthetists - (NANA) - whose name was later changed to the American Association of Nurse Anesthetists - (AANA), - was to develop the mechanisms for establishing a program to evaluate schools of nurse anesthesia.

Development of an Accreditation Process

An Education Committee was established in 1933 and with the assistance of other NANA committees, was charged with the development of educational standards, maintenance of a central bureau, and compilation of lists of approved schools and qualified instructors. To that end, preparations included identifying hospitals that operated schools of anesthesia, visiting those schools, and analyzing the content of their curriculums. These efforts resulted in written guidelines that established minimums of a 4 months' course of study, 250 anesthesia cases, and 75 hours of classroom instruction. The work of national committees over the following decades resulted in refinement of early education guidelines and identification of essential elements for nurse anesthesia education.

At the 1950 AANA Annual Meeting in Atlantic City, New Jersey a resolution was unanimously adopted to create a plan for accreditation of nurse anesthesia schools. The formal accreditation program began 2 years later when the 1952 AANA Board of Trustees accepted criteria for accreditation of schools and delegated responsibility for its implementation to the Approval of Schools Committee. In addition to support shown by the vote of AANA members, the new process to accredit nurse anesthesia schools was endorsed by the American Hospital Association (AHA).

From 1937-1975, the educational guidelines, voluntary approval process, and eventually the accreditation process focused only on hospital-based schools of anesthesia. In 1970, the accreditation standards recommended that schools pursue the goal of offering college credit for coursework. The first mention by the Council on Accreditation of Nurse Anesthesia Educational Programs (COA) accrediting degree granting schools was recorded in the 1976 standards indicating that the same standards applied to certificate and degree granting schools. Increasingly higher expectations for graduates to earn higher education degrees continued over
the years with accreditation standards for master's degree programs in 1998, optional research-oriented and practice-oriented doctoral degree programs in 2004, and draft standards for practice doctoral degree programs in 2012. All accredited nurse anesthesia programs offered masters level education as of October 1, 1998, and all programs must offer doctoral degrees by 2022.

**Organizational Structure**

In 1955, AANA was listed by the U.S. Commissioner of Education as the recognized agency for accreditation of nurse anesthesia schools. The accreditation function was transferred to the AANA’s Council on Accreditation of Nurse Anesthesia Educational Programs/Schools in 1975, in response to a major revision of the U.S. Office of Education criteria. The revised criteria reflected many of the sociopolitical concerns of the time: (1) public accountability, (2) conflicts of interest, (3) consumer protection, (4) nondiscriminatory practices, (5) due process, and (6) community of interest involvement. These criteria mandated a structural change in the AANA that resulted in the formation of three semiautonomous councils - accreditation, certification, and practice. These councils were granted full functional and operational autonomy over the next 3 years, after proving their effectiveness in performing their respective responsibilities. A fourth council, recertification, was established in 1978 to serve as the monitoring body for the continuing education of nurse anesthetists.

The COA continued to exist from 1978 to 2009 as an autonomous, multidisciplinary body under the corporate structure of the AANA. In 2009, due to concerns by the AANA regarding compliance with Illinois State law and difficulty in the indemnification of COA directors and onsite reviewers, the COA separately incorporated. It is now recognized as a 501 (c) (3) accrediting organization by the IRS.

**External Recognition of COA**

The COA has been continuously recognized by the U.S. Secretary of Education (formerly the U.S. Commissioner of Education), U.S. Department of Education (USDE) since 1975, as well as by the Council on Postsecondary Accreditation (COPA) or its successor, the Commission on Recognition of Postsecondary Accreditation (CORPA), since 1985. The Council for Higher Education Accreditation (CHEA) assumed CORPA’s recognition functions in 1997. COA maintains USDE recognition under the legislative mandate that calls for the U.S. Secretary of Education to identify reliable authorities for the quality of training that is offered by programs. COA maintains CHEA recognition to demonstrate its effectiveness in assessing and encouraging improvement and quality in programmatic accreditation. COA also subscribes to the Code of Good Practice for accrediting organizations through membership in the Association of Specialized and Professional Accreditors (ASPA).
COA's scope of accreditation was clarified by the USDE in 1993 and by CORPA in 1994 to delete reference to generic programs and specify nurse anesthesia programs that prepared graduates at the certificate, baccalaureate, master's, and doctoral degree levels. In 1997, the scope was revised to delete baccalaureate programs that no longer existed. Currently, the COA is identified by the USDE and CHEA as a nationally recognized accrediting agency for the accreditation of institutions and programs of nurse anesthesia at the post-master's certificate, master's, and doctoral degree levels, including programs offering distance education in the U.S.

Changes to the Higher Education Act, later named the Higher Education Opportunity Act - (HEOA) have resulted in COA revising its standards with each reauthorization as needed to comply with federal regulations for accrediting agencies. Regulations have been adopted requiring accreditors to review an institution's and/or program's compliance with tuition in relation to the subject matter taught, default rates in student loan programs, records of student complaints, and attrition, graduation, certification, and employment rates among others.

A significant change in federal regulations occurred during the 1990s. Congress set stringent requirements for the federal government, state governments, and accrediting agencies, including COA, to increase oversight of institutions that participate in federal programs such as student aid. The original impetus for this action was an unacceptably high national rate of college graduates who failed to repay their federal student loans. As a result, only accrediting agencies linked to federal programs were eligible for new or continued recognition by the U.S. Secretary of Education. Several accrediting agencies were "de-recognized" during this time.

The COA continues to be officially recognized as the only accreditor for nurse anesthesia educational programs in the U.S.. Graduation from a COA accredited program is required: (1) as the basis for ascertaining eligibility for federal programs under selected legislation; (2) to sit for the National Certification Examination; (3) for licensing in state rules and regulations; and (4) as a condition of employment.

**COA Membership and Staff**

The most recent changes in COA membership occurred in May 2002 to comply with USDE requirements. The AANA Education Committee Chair member was replaced with a CRNA educator member and a second public member was added. The resulting COA membership includes 5 CRNA educators; 2 CRNA practitioners; 1 health care administrator; 1 academic administrator; 2 public members; and 1 nurse anesthesia student. COA's membership represents the various publics within the nurse anesthesia community of interest in which the profession resides. All representatives are members of the COA Board of Directors and have been vested with full decision-making and voting powers with the exception of the nurse anesthesia student who serves as a non-voting member.
COA staff consists of the Executive Director of Accreditation, accreditation specialists, and administrative support personnel. The Executive Director oversees operational activities and works closely with COA Directors. Accreditation specialists work directly with program administrators, on-site reviewers, and consultants on accreditation and education related activities. Office operations specialists support the development, implementation and ongoing support of technology and communication. In 2008, a major change in COA operations was the deployment of an electronic accreditation business process management system (i.e., COAccess).

**Movement to Doctoral Education**

Educational requirements have continued to increase since the establishment of a national organization for nurse anesthetists in the early 20th century. Schools of anesthesia have moved from apprenticeships at hospitals to programs affiliated with institutions of higher education offering graduate degrees. Official positions taken by the COA and AANA have facilitated this movement including support for nurse anesthesia program applicants to possess baccalaureate degrees, support for the education of nurse anesthetists at the post-baccalaureate level, transition of programs to the master's degree level, and more recently to the doctoral degree level.

The first COA requirement for degree programs was published in the 1990 standards for all nurse anesthesia programs to transition from awarding certificates to awarding master’s degrees. By October 1, 1998, all accredited nurse anesthesia programs were offering master’s level education.

Exploring doctoral level education for nurse anesthetists has been a methodical, deliberate process. In 1996, the AANA appointed a Doctoral Task Force to study the feasibility of doctoral degrees for nurse anesthetists. This task force found little support for the idea at that time. However, the COA published standards for optional practice-oriented and research-oriented doctoral degrees in 2004 because of the continued interest in and movement toward doctoral education for nurse anesthetists.

The transition of many health care roles to the practice doctorate for nurses and other non-physicians in the U.S. has been driven by national health care policy as attempts are made to reduce medical errors, mediate health care costs, and improve quality and outcomes for patients. Practice doctorates have been established for many health professions in this environment (e.g. optometry, audiology, pharmacy, and physical therapists). As part of this societal movement for health professions to hold practice doctorates, the American Association of Colleges of Nursing (AACN) published a position statement in October 2004 for its member colleges to transition all advanced practice nursing education to the doctor of nursing practice
degree. The AANA convened a summit in June 2005 to re-explore doctoral preparation of nurse anesthetists. Pursuant to its summit, the AANA appointed the Task Force on Doctoral Preparation for Nurse Anesthetists (DTF). The DTF held meetings between December 2005 and February 2007 for the purpose of developing options for the doctoral preparation of nurse anesthetists. The DTF provided its report to the AANA Board of Directors in April 2007. In June 2007, the AANA Board unanimously adopted a position statement to support doctoral education for entry into nurse anesthesia practice by 2025. The COA subsequently explored the accreditation ramifications of the AANA position statement regarding doctoral education. In January 2009, the COA voted to require nurse anesthesia educational programs to transition to a doctoral framework no later than January 1, 2022. All entry-into-practice graduates from nurse anesthesia educational programs will be required to possess a doctoral degree as of January 1, 2025.

The COA has taken key steps in transitioning to doctoral level education for nurse anesthetists. These included notification to accredited programs that: (1) the COA will not consider any new master’s degree programs for accreditation beyond 2015; (2) students accepted into an accredited program on January 1, 2022 and thereafter must graduate with doctoral degrees; (3) doctoral degrees will be required for the CRNA program administrators (program administrators and assistant administrators) in all doctoral programs by 2018. All degrees must be awarded by a college or university that is accredited by a nationally recognized institutional accreditor.

Recognizing the need to develop comprehensive standards for entry-into-practice doctoral programs, the COA subsequently appointed a Standards Revision Task Force (SRTF) in 2010. The SRTF performed extensive research and analysis of data both from within and external to nurse anesthesia education. The SRTF considered input from various communities of interest as it set about its work. These communities of interest included nurse anesthetists from varied practice settings, the AANA Board of Directors, the AANA Education Committee, the National Board of Certification and Recertification of Nurse Anesthetists (NBCRNA), student nurse anesthetists, other nursing groups, university officials, educational accreditors, healthcare administrators, physicians, related healthcare professions, regulatory authorities, payors of healthcare services, patients, and the public. The need to develop an understanding of competencies expected for entry into nurse anesthesia practice was integral to the SRTF’s work. Following extensive multivariate efforts by the SRTF, the COA approved the following understanding of the concept of nurse anesthesia entry-into-practice competencies at the doctoral level:

Entry into practice competencies for the nurse anesthesia professional prepared at the doctoral level are those required at the time of graduation to provide safe, competent,
and ethical anesthesia and anesthesia-related care to patients for diagnostic, therapeutic, and surgical procedures.

Entry into practice competencies should be viewed as the structure upon which the nurse anesthetist continues to acquire knowledge, skills, and abilities along the practice continuum that starts at graduation (proficient), and continues throughout their entire professional career (expert).

Note: The following paragraph references steps in the approval process that are scheduled to occur on the specified dates. Revisions will be made to the text should future events so indicate.

The SRTF presented its first draft of the Standards for Accreditation of Nurse Anesthesia Programs: Practice Doctorate to the COA in January 2012. By 2013, input was solicited from the AANA Education Committee in the development of the standards with the first draft of revised standards sent to the committee members in preparation for their conducting selected hearings. Further, the AANA Education Committee has provided input throughout the developmental process according to written procedure. This procedure has practical considerations since the Council is the entity with knowledge of laws, regulations, and other requirements and constraints imposed by external authorities governing accrediting agencies in the U.S. Several drafts of the standards were developed based on comments received by the COA, SRTF, and AANA from all stakeholders from 2012 – 2014. Following careful consideration of all inputs, the COA approved the final draft at its October 2013 meeting. The trial standards were implemented in January 2014, and became required standards in January 2015.
